

Module 5 Wrap-Up Activity

Information Detective Challenge

Course:

Introduction to Computing / IT Fundamentals

Module:

Module 5 – Information Literacy: Searching, Accessing, and Evaluating Information

Student Name: Dela Cruz, Michaela

Section:BSIT1-S10

Date:8/14/2026

Learning Objective

Apply effective search strategies and evaluate the reliability of online information using the CABC Test (Credibility, Accuracy, Bias, and Currency).

Instructions

For this activity, you will act as an Information Detective. Your task is to search for information on a chosen topic, evaluate the reliability of an online source, identify its source type, and determine whether it is appropriate for academic use.

Choose ONE topic from the list below:

☐ Artificial Intelligence in Education

☒ Cybersecurity for Students

☐ Social Media and Mental Health

☐ Cloud Computing

☐ Digital Citizenship

Part 1 – Smart Searching

Your Search Query: cybersecurity safety tips for students protecting personal information online

Part 2 – Source Selection

Website Title: Secure Our World

Website URL: <https://www.cisa.gov/secure-our-world>

Part 3 – Apply the CAB C Test

Evaluate your chosen website using the CAB C Test.

C – Credibility

The information is published by the Cybersecurity and Infrastructure Security Agency, a U.S. government agency responsible for helping and protect the country's cybersecurity and critical infrastructure. Because the information comes from a government cybersecurity agency, it is a credible source for learning about online safety.

A – Accuracy

The website provides practical cybersecurity recommendation such as using strong passwords, turning on multi authentication, recognizing phishing attempts, and keeping software updated. These are common cybersecurity practices that can help students protect their accounts and personal information details.

B – Bias

The website is mainly designed to educate and encourage people to practice safer online behaviors also It is not primarily trying to sell a product or service its purpose is to increase public awareness about cybersecurity.

C – Currency

The information is maintained by the Cybersecurity and Infrastructure Security Agency as part of its Secure Our World, cybersecurity awareness campaign and since cybersecurity threats and recommendations can change over time, using a government website that maintains its cybersecurity guidance makes it a useful current source.

Part 4 – Source Type

Identify the type of source.

☐ Scholarly Source

☒ Professional Source

☐ Public Source

Explain why you selected this source type:

I selected Professional Source because the information comes from Cybersecurity and Infrastructure Security Agency a government cybersecurity agency with expertise in cybersecurity and online safety. The website provides professional guidance rather than personal opinions or information from an unknown author.

Part 5 – Final Decision

Would you use this source for a school assignment?

☒ Yes

☐ No

Justify your answer using the CABC Test.

Yes I will use this source for a school assignment because the source is credible therefore it was published by the Cybersecurity and Infrastructure Security Agency. It provides practical and relevant information about protecting accounts and personal information online the website is intended to educate the public rather than sell a product lastly after applying the CABC Test, I consider it a reliable and appropriate source for my assignment.

Reflection Question

What is the most important thing you learned about searching for and evaluating online

I learned that finding information online is not enough also I need to check the credibility of the author or organization, the accuracy of the information, possible biases, and how current the information is applying the CABC Test helps me choose reliable sources instead of simply using the first website that appears in a search.
